

DayPlanner

Falck Igel, our Norwegian distributor, has invested in research and development of a leading cognitive product to assist with time management. The DayPlanner is a magnetic wall-mounted whiteboard with electronic visual and auditory time prompts making time easy to understand and helping to structure the day. Toby Churchill Limited is pleased to distribute this product in the UK, extending our range of reliable and effective equipment into new areas of disability.

DayPlanner features

- pictures, symbols and/or text can be used to prompt activities
- day time is shown by a column of red lights on a 16 hour scale. Each column equals one hour
- night time is shown by a column of blue lights on an eight hour scale. Each column equals one hour.
- time can be shown with one dot instead of a column. Each dot represents 15 minutes
- optional digital clock
- adjustable brightness of the lights
- alarm can reinforce visual prompts
- option for alarm to be sent to a mobile phone

settings:

- alarm for start and end of activity
- sequences daily activities
- separates day from night
- visual prompt confirming activity
- reinforces structure of day.

Technical specifications:

Size: 612 mm x 462 mm x 40 mm

Ordering information:

Falck 5141 DayPlanner

Optional Accessory Pack (includes: ideas booklet, whiteboard marker, bottle of whiteboard cleaner, magnetic wiper, colour magnets, symbols, complete wall-mounting kit).

The DayPlanner has proven successful across all ages and in many different

“My ‘special watch’ is my friend”, says Alex who is 10 years old and has autism. He really likes his DayPlanner, its his

‘special watch’. Activities like ‘shower’ used to be a big issue for the family because Alex refused to shower and they often had a fight about it. Now when his ‘special watch’ tells him to take a shower he does it without a fuss. Alex used to sit and wait in front of his DayPlanner until

it was time for the next activity to start, afraid to miss the alarm for the activity. After connecting the DayPlanner to his mobile phone he is more relaxed. He now plays outdoors with the other kids without being afraid to miss his alarms from the DayPlanner.

A school for children with learning disabilities has a DayPlanner in the classroom. When school begins, pupils and

the teacher talk about what is going to happen during the day. Together they put PCS symbols and text on the DayPlanner.

- This has reduced the number of times the teacher has to answer: “When is lunch?” “How long do we have to do maths?” “Do we have gym before or after art?”
- Pupils find it easier to understand time with a DayPlanner, for example they have a feeling of how long an hour is, how much they can do before the next activity starts or when it’s time to go home.
