

Welcome to Lightwriter® SL40 Some best practice tips for SMS messaging.

We hope you are finding your new SL40 easy to use and that the User Guide is helping you with more advanced features. It is important to us, at Toby Churchill, that you get the best and most efficient use of the equipment.

Texting – the SMS texting feature is new to Toby Churchill products and is changing the way people are using their lightwriter, extending the scope and range of their communication. We hope you are finding this feature useful, here is an extra tip which will speed things up:-

‘If using the SL40 to send and receive text messages please make sure the **suspend time** is set to more than **1 minute**. This gives the SIM card time to register without disconnection and to send and receive texts more successfully.’

Prediction, phrases and abbreviations – during the design process we built in lots of features we hope will help speed up your communication. You will have found the prediction, but you may need to look a little harder for the phrases and abbreviations.

Page 11 of the user guide is the best way to learn more about these features - but just press  in Talk to see all the phrases already stored. To see a shorter more specific list type a key word such as *drink* and press . It is very easy to personalise the list by adding phrases of your own.’

We hope these tips help but remember more help is also available in the user guide and on our helpline.
